ABSTRACT: *The paper is a very personal life experience that I am compelled to put to paper. Dios me dará justicia. For ethical reasons no real name has been mentioned in the paper. This paper deals with the Case study of the Court convicted violent psychopath, Estafadores, an annoyer, a drug addict, who tried to ruin my life. She says she cannot live without me, wants to get married with me and have children with me and that supposedly her baby is mine,she annoys everyone, half of the planet why I am not writing I want her, why I am not saying its my baby, she pretends to be crazy in love with me but in reality they catch her living happily is Spain with another man and doing X rated videos. Her baby is growing up with her biological father in luxury and comfort. I was the only one who really loved you, I would had forgiven you everything but you could not resist to betray me. Any other woman can give me what I wanted from you. Love. In a world of liars, you turned out to be the worst dishonest crook I have ever known. In your mind, its never you, its always someone else. I go to search for someone else. Kindly forget me. I am still Single Virgin and no child yet. An overview of the importance of fidelity and dangers of having several partners such as HIV/ AIDS. A honest partner is a safe partner. A liar is a potential health risk.A drug addict also is a high risk target particularly when the drug addict uses shared syringes. Many partners, and drug are a deadly combination for virus infections.*

KEYWORDS: *psychopath, crook, x rated videos, fidelity, HIV/AIDS*

I. INTRODUCTION

What does fidelity mean?

Fidelity can be defined as not kissing, touching nor having any sexual intercourse with anyone else. Being faithful is the foundation of any relationship. Where there is no fidelity, the relationship crashes. There is chaos and no trust, only suffering and sadness. Breaking the trust of someone breaks the relationship. There is no

greater dishonesty in a relationship where there is infidelity. Infidelity means that you love someone else. The relationship cannot work and is over. Both sides need to move on.

II. LITERATURE

What is HIV / AIDS ?

Acquired immunodeficiency syndrome (AIDS), is an ongoing, also called chronic, condition. It's caused by the human immunodeficiency virus, also called HIV. HIV damages the immune system so that the body is less able to fight infection and disease. If HIV isn't treated, it can take years before it weakens the immune system enough to become AIDS. HIV is spread through contact with genitals, such as during sex without a condom. This type of infection is called a sexually transmitted infection, also called an STI. HIV also is spread through contact with blood, such as when people share needles or syringes. It is also possible for a person with untreated HIV to spread the virus to a child during pregnancy, childbirth or breastfeeding. There's no cure for HIV/AIDS. But medicines can control the infection and keep the disease from getting worse. Antiviral treatments for HIV have reduced AIDS deaths around the world. Better antiviral treatments have greatly decreased deaths from AIDS worldwide. Thanks to these lifesaving treatments, most people with HIV in the U.S. today don't get AIDS. Untreated, HIV most often turns into AIDS in about 8 to 10 years. Having AIDS means your immune system is very damaged. People with AIDS are more likely to develop diseases they wouldn't get if they had healthy immune systems. These are called opportunistic infections or opportunistic cancers. Some people get opportunistic infections during the acute stage of the disease (Mayo Clinic, 2024).

III. DISCUSSION

Relationship between Fidelity and HIV /AIDS

A honest partner is a safe partner. A liar is a potential health risk. There are no official studies done on the subject of Fidelity and HIV/AIDS simply because people will not reveal the number of sex partners they had, how many different men/women kissed, touched, having sexual intercourse with but having many sexual partners implies a libertine sexual life and thus a higher risk of having sex with someone having HIV/AIDS. The inverse also is true practicing abstinence and sticking to one person who is clean, will put the risk to get infected while sexual intercourse, even if unprotected, to zero. Condoms offer 90 % of protection so having sexual intercourse, even if protected, with many partners who have the virus can lead to a risk of catching HIV/AIDS. Another paper can contradict this statement and say you can have many partners and no risk of catching any virus but if someone believe them and get the virus, will the author be accountable? The safest advice to give to the people would be that having a lot of partners can be a high risk of catching HIV/AIDS. One-night stand with someone most of the time, is with a stranger and someone you do not know their medical records. This also brings a high risk of HIV/AIDS. HIV targets the body's white blood cells, weakening the immune system. This makes it easier to get sick with diseases like tuberculosis, infections and some cancers. HIV is spread from the body fluids of an infected person, including blood, breast milk, semen and vaginal fluids. It is not spread by kisses, hugs or sharing food. It can also spread from a mother to her baby. HIV can be treated and prevented with antiretroviral therapy (ART). Untreated HIV can progress to AIDS, often after many years. A drug addict also is a high risk target particularly when the drug addict uses shared syringes. Many partners, and drug are a deadly combination for virus infections.

IV. CONCLUSION

Betrayal is always hard to take when you give your soul to someone. Cleanliness is next to Godliness and fidelity is a form of cleanliness. Both in terms of spirituality and health. Fidelity remains the key to any form of relationship. You have a partner, so stick to your partner and do not search other spouse. A condom only protects you 90 % and having several partners increase the risk of getting infected by a virus HIV/AIDS. Being still Virgin I believe in having one partner all your life.
